

Tell me Doctor, where are we going this Time? - Feb 3, 2015

Glen: You're early.

Jerd: Yeah, I know, it's a little different.

Glen: I just came back in from feeding the animals.

Jerd: Feeding the goats, and all that stuff?

Glen: Goats, and chickens, cats, bringing water. It's 22 below centigrade here, so do your conversion.

Jerd: I have to type that in. I can't do it in my head. I woke up today at like 4 in the morning, and I turned on the news to see what was going on. I guess it was the timing of the stuff that I'm seeing on the news. I actually took notes, and these were the developing stories on CNN, the way they were presenting them. One story was, North East railing from winter storm icing on roads creates dangerous conditions. Another one was Michigan soccer dome collapses, heavy wet snow prompt failure. Another one was snow storm causes more canceled flights, Airlines face backlog from back-to-back storms.

These are record-breaking storms, they say. Another one, was measles outbreak continues to spread now to 102 cases in 14 states, most linked to Disneyland. One of the cases is a New York college student got on an Amtrak train from Penn Station, New York City. They are saying that there's concern that the student spread measles, because it's a disease that's highly contagious. All that stuff to me, Glen, was kind of saying they wanted people to be seated, and don't go anywhere, just be stuck in an area.

Glen: Well, the major title to what is going on right now is **“going back in time”**. **Going back in time begins now, and the end of the journey is the reassembly of a male-female hermaphrodite. That's where it all began, the journey of going forward by the splitting away of genders out of the female to female-male, walking side by side. Now the journey ends and a reversal must take place, prior to the exploration in space, by a female-looking hermaphrodite, that carries a Trojan male hidden within her own body.**

If you watched the Super Bowl, you would have seen the woman **“dancing in the stars”**. She was raised up on a pendulum, and the stars in the background, is basically the journey they were describing. When she came out to do the show, she was riding **piggyback on a tiger**. So, when Tigers start to move, the process goes back in time to when he used to play golf properly. Now he started off at the **Waste Management** Golf Tournament in California.

Waste Management, **aster**, is the Latin word for star; **asteroid**. Waste **Management** → **Man** → GE → **genetically engineered**. The final part is a ten. A perfect woman is “**a ten**”. **That's a woman that contains the mechanisms of a male**. Serena Williams won the tennis tournament in Australia. **She's about 6'2 and has shoulders basically like a middle linebacker in football. She would be a physical model of what they're talking about. Tiger would be a model for consistency of play.**

Now if one thing is certain for the last six plus years, he's been totally inconsistent after having been consistent all of his life up to that date. When he played in the Waste Management Tournament, which is the first one, and we know that number one doesn't count, it's cosmetic, number two is where you start. Number one, he missed the cut by coming in last in a field of **132** players. **One, two, three, go.**

Left for home. Now he comes back to play this week on Thursday at a golf club called **Torrey** Pines. Torrey is of course the word for “**Trojan**” or “**Troy**”, although it's spelled differently. **It doesn't matter because it's a Phoenician phonetics that matters**. That's why the phone company is so important; at the top of it all; AT&T in the U.S. Torrey Pines has the word “pines”. Well, we know that in the world of trees, **a deciduous tree cannot grow unless it's provided some cover from wind, snow and storms.**

The cover is pine trees. The seed of pine trees are cones. They come out like a volcano out of the ground. They are the Christmas tree that has all the beads and baubles on it. But their real function, as with the **spine**, pines being coniferous trees, can withstand wind, rain, and snow, in a manner that deciduous trees would depend on leaves at the end of a twig cannot. **So, the spine suggests the beginning of humans and other animals. The pine preceded them in the world of trees.**

Now, “**trees**” are linked to the word “**three**”, **which when written down appears sideways like a pair of breasts**, like the capital letter “**E**”. Must be genetically engineered based upon the fact that **the tree was the first plant that developed memory**. A breast, of course, is centered on a “**mammary**”; nipple. In other words, **the mammary is the storage site for memory in human beings. That's why males have them, too.**

Mammary consists of a number of glands, which when activated, cause certain activities in the body to occur. They can be affected by a magnetic field, create a cluster of glands, and you destroy their independent capability. That's how the world was viewed by the founders of voodoo; that you must be able to control from a distance. The only way you can do that, knowing physics, is through **magnetism**.

A magnet is not a hurtful product, since the earth is basically a magnet on its own. **But the minute you add an electrical circuit to the magnet, you double its magnetism, and that attracts the glands and forces them into a cluster.** Nuns operate their genetic engineering labs in monasteries, where they have many levels, just like the rings of a tree.

They're called a “**cloister**”, and their genetic engineering happens on the inside cloister, surrounded by a number of cloisters, like rings on a tree. **They hold the keys to the memory of the planet, which of course they stole from the archives built up by priests.** Such was the case before the Ice Age, when voodoo was proposed as a religion that could control from a distance.

The nuns of voodoo, **mothers superior**, are what is the derivative of the original woman, a hermaphroditic woman, called a “**fat her**”. The father is just a play on words. **The real controlling interest is a hermaphroditic woman, who has within her own body, the ability to impregnate herself. Very much needed at the beginning of mankind, since normal genetics of nature would have created a male in one place, and a female in a different place.**

More than likely, the first males were born in the Balkans, northern Europe, where the females were created in Africa, and not being together, they could not copulate, and therefore had to form a temporary system. That was the advent of a clone structure, making females that were copies of the original mother. From then on, you had to wait for the time when females went north and males went south, meeting at a place one would suggest is the Black Sea today. They decided to copulate and found that it was a better system for the time envisaged ahead, which would be working on a project to lead them to outer space.

Jerd: With the copulation in the beginning, when it was the females who couldn't copulate and the males on the other side, did they use, to create these clones, the women from East Africa, or did they somehow impregnate the women who couldn't give birth?

Glen: **It appears to me that a group of women who could not clone themselves, would have been kind of outcast in the system, and were the most likely to walk away from the existing group.** Probably centered on East Africa, along the Nile Valley leading into the mountains at the beginning of the White Nile. **In those mountains, the females who could clone, extended themselves, take up much of that space around Mount Kilimanjaro, and the females who couldn't clone themselves went north.**

In the north, there are signs that suggest that an avalanche basically awakened the Neanderthaler to the concept that he could live longer through creating a child if only he knew how to convert himself into a separate youngster. **Working on that concept, an avalanche took out thousands of Neanderthalers, and they became the focus of an industry.** How do you take a person who is dead, but not quite dead, out of an avalanche, heat it up, and let it walk again?

Of course, they found out that as soon as the body thawed out, it died. **They had to come up with a system to basically make it possible for themselves to live longer. When the women came around and copulation occurred, they saw this as a temporary solution, and they began to make children together.** At one stage of the game, understanding the process of birth, requiring an amniotic fluid, requiring sperm, requiring an egg, and requiring a kickstart, as you would with a frozen car. They began to say, hey, we can do this on our own, we don't need to be sharing it with women, let's get rid of them.

They planned a flood into what was at the time, a major valley, north of what is now Turkey, the Black Sea, and broke the Bosphorus and let the water run in. But the women got wind of what was going on, got out of there, and moved down closer to Syria, across what is today's Turkey. Leaving the spot in the Black Sea open, where the battle is going on now by the Russians, who want control of that space; a place called **Ukraine**, UK rain.

So, the two of them grasped the possibilities of making children on their own, and what they needed, and formed monasteries. Monasteries for males, monasteries for females, each working on their separate concepts. Males are basically task-oriented, and once their task is complete, they get bored with the idea, and move on to something else. Females are task-oriented in archiving all of the knowledge known.

So, there was a seepage away from the male knowledge to the female knowledge. That became apparent during the time of the Crusades, where males went off to fight wars, and females were left behind, always afraid that those people who didn't go away, or those men who came back, were looking for females and needed a defense mechanism. **They finally agreed to merge in what was known as a dual monastery.**

Something as if you were looking at two breasts, each one being a nurturer on its own, each one having a system for making children on their own, and sharing tasks in the middle. **The female more the interior task, the male more the exterior task, and while the males are away, the pilfering of the archives goes on and the females get the advantage.** When they come back to Europe, the males are into banking, hotel keeping, and that kind of stuff for travelers. While the females are more into education, nursing, and that kind of stuff.

So, it's an evolutionary process created by Creation through an evolutionary process called chance. **Given sufficient time and the proper materials, male and female could be created out of what came delivered to this planet by asteroids; different chemicals, different minerals. At one stage of the game, as luck would have it, they would merge into making a single male unable to procreate but able to live a long life, 900 years or so, and a female who could procreate but had nobody to procreate with.**

These are accidental coming together of the proper ingredients in a system called evolution. Evolution is a very slow process over a long time, which makes a gigantic leap all of a sudden. A cataclysmic event generates that leap and an asteroid is such a leap. Well, before the Ice Age, these communities, small in numbers but long in time, developed the concepts that in order to verify a truth, you must do it through the repetition of experiments under all kinds of different conditions in weather, in geography, in possibilities.

In finance, there is a law, I think, called the theory of possibilities, or something like that, which basically is the basis of insurance companies. They determine how long people will most likely live. What they're doing as a lifestyle will determine how long or short that period of time is. They lend money based upon that, and that's the part learned by men. Whereas women have a much longer project.

If evolution requires certain products that did not exist on the planet, and then came to the planet by means of an asteroid, doesn't it now make sense that if you want to go faster in your development, that you don't wait for the accident to occur, you go out and retrieve what you need right away? In order to do that, you need a hermaphrodite because it's too expensive to send a colony outside the planet, if all they're doing is exploring an asteroid to find out exactly what's there.

You can do it mechanically by sending a rocket and a rover, but it's very limited. A human being guided from head office on the Earth is much more practical. That human being has to be in a position to regenerate itself. **We know that the Egyptians were working on the process.** We know they found some answers. **We know that the Crusades were done in the world of the Middle East, where the people who had in fact worked in the labs in Egypt had migrated to.** We know that the word Moses comes from Thutmose; Thutmose was an Egyptian pharaoh.

Therefore, if you look at the story of the 18th dynasty, it basically explains how a group came from Syria looking for what answers Egypt had developed in the world of genetic engineering, [and] created another religion called **"Aten"**. A perfect woman is a female-male held together by technology; the capital letter A and then the number 10; Aten. They, under the guise of creating a new religion, stole what the Egyptians had called **"Amen"**; **men only were in charge.**

They took it out of Egypt and Moses led the men into the wilderness for 40 years while his wife, a descendant of Sarai, a thousand years before, went to a place and called it "Sarai" or "Isra" by changing the letters around and adding **"le"** in front to make it male-female; male participle. Male is in the letter "E" as opposed to "A", and if you look at many of the old writings, A and E are joined together...

Jerd: Yeah, they call them diphthongs.

Glen: In type setting. So, the rule now is the female's been developed. The female used to be a number "9" and the male a number "8". **The female has been developed and modified into a number "6"**. In other words, it's **transubstantiated**. **What you see appears to be no different than what used to be, but in fact is transubstantiated, which basically means it has been affected, and acts differently than the original, without showing any outward appearance of the change.**

That was done through genetic engineering. **The day they completed the project, number "9", Pluto, was demoted.** Just another stone in the sky and not a planet. **Now the attention turns to male, and through the activities of electromagnetic fields, they are able to affect the glands of a male to the level where it disrupts the possibility of copulation.** In order to test it, they made drugs called Cialis or Viagra, and they've been able to confirm that what they did caused the problem and a reversal of the problem can be achieved by certain chemistry.

Although that chemistry has a lot of byproducts that can affect the person in many different ways, especially in depression, mental illnesses, which require permanent care, such as **Alzheimer's**. **Something that many more families will have to live with shortly. What we're seeing is a reversal in time, and all the hints are pointing the finger that we're going back in time.** Now to go back in time, you've got to take a guy like Tiger Woods and make him play the way he used to play.

You've got to take women and make them leaders of countries instead of leaders of families or caretakers in a family home. **Because that's what Clan Mothers used to do; they led the clan, they were the judges, they were the politicians, if you will. They basically held court at night and made decisions that affected the clan's direction.**

Well, we're getting ready to see the election of a woman as President of the United States. **You have women as Presidents of minor countries all over the world now. That's because that female, unbeknownst to her, has a male inside.** At least the product of a male sperm that can in fact eventually be used to make her into a hermaphrodite. But by looking at what men do, women begin to follow the lead, and take over the lead.

A man is like a number one; it's a cosmetic person used for learning. A female in appearance is the obvious end product. Transubstantiated female. **That's the story of Jesus and the Last Supper; saying, this bread has been transubstantiated into me. It still looks like bread, but it is my body. This wine has been transubstantiated into my blood. It still looks like wine, but it really is me.**

Of course, Jesus Christ is not a single person, but a gene pool called Caucasians, and at the end of the experiment, what happens to Jesus? He is crucified and is removed for a period of time, when he then reappears as a spirit. In other words, he goes down to the Moho discontinuity, joins the clan of Neanderthals that occupy that space since 24,000 B.C., is sent out to make occasional appearances to help the plan along, uses the knowledge that women collected.

Their role is subsurface as opposed to Moho discontinuity. Subsurface means that they do the genetic engineering. **They live in a cloister within a cloister within a cloister within a cloister, and make human beings at this period in time as sleeper cells, just like Vic Toews. Vic Toews was made by the Natsi, who moved to South America in Paraguay.** To a **Mennonite** family who lived in Manitoba at that time. Then came back to Canada to end up being the **cabinet minister responsible for public safety.**

Now, that's the same kind of activity they had done at the beginning to make royal families. Vic Toews, however, and royal families in a democratic society, don't get their way. **Because there has to be a pretense in a democratic society that people are in charge.** Most of the genetic engineering, by far, is now done at the other end of the control system that operates in democracies. In other words, they are called "**clerks**".

Clerks are the range of tasks that cause the power system to have to deal with public. The public is basically unaware that when they approach their government, they can never speak to power. Because the only people that will speak to them representing the government are sleeper cells, and they are sleeper cells for Nazis. The original word Nazi is **N-A-T-S-I**. As in **Pakistan**, **Afghanistan**, **Uzbekistan**. But more secret than that, **Puritans**. Novatians → **Nova-atians**.

From Asia, if you write the word "Air Asia" and read the letters in Air Asia, you'll find the word "**Sarai**" **hidden in a Trojan horse**. That's why we've had a disappearing airplane, another one that crashed, and a third one that was shot down. **All flown by men**.

Jerd: Did you catch the Rose Bowl parade this year, by chance?

Glen: Yeah, I thought it was the most perfect example that one could think of a very evenly divided tournament, if you can call a football game a tournament. Each one with their chance of success scoring seven points, making it 14, making it 14-7, making it 14-14. **All of the use of the number seven**, until you arrive at a point where one team has 28 points and the other one has 24 points, and there's only four and a half minutes left to play in the game.

How in the hell does an electromagnetic system allow a ball that was to be caught to pop up in the air and bounce three times across a person's body before he catches it on a four yard line? How in the hell does a guy who gets down to the one yard line, then decide to throw a pass as the coach informed his quarterback to do? When you're on the one yard line and you have the best rusher on your team who is known for his ability and you got at least two or three shots at getting the one yard, as a runner, why would you throw a pass?

Without a knowledge in these people of what we've just talked about, they have no way of knowing that it was anything but a mistake. **They have no way of knowing that every decision they made in that football game, as they do in any sport, was predetermined for them and assisted by a magnetic field.**

Jerd: I was watching a piece on CNN about a pre-Super Bowl thing, and they were interviewing the coach for the Seahawks. The interviewer brought up that this coach was different from all the other coaches. Some were even calling him a new age coach because he incorporated yoga, meditation into the training of the athletes. Which made me think of how in meditation they use certain types of technology to control people.

Glen: **People think they're meditating when in fact they're being programmed.** Genetic engineering began at least in **58,000 BC**. **Trees began their journey of learning about memory at least in 81 million BC**. Human beings began to consider sleeping together at a period sometimes around **80,000 BC**.

Memory in a tree is very valuable, and you'll have seen stories written about how scientists are now preparing to link trees by a wireless system. So that what's happening to one tree can be compared to what's happening in another tree. Therefore, they can read the path of a change in weather patterns that is occurring, by simply reading what is affecting one tree as opposed to affecting a tree 100 yards away. They would know exactly how the tree is reacting because what the tree is doing is shaping its memory ring for that year.

The problem that you have with memory in a tree is it's only measuring one place on earth, and therefore, evolution says, what you need is a walking tree. A walking tree would measure different places. **Human beings are the walking trees; they are called rim, research in motion.** Now, Creation through cellular memory, called the Cell, told me that **the introduction of sleeper cells into democratic societies began in the early 20th century; it began in 1789.**

That top-down management would not survive in the future unless a change to an appearance of democracy invented by Greeks many years ago. It's not an accident that Greece announced today that they are going back in time. That they are not going to be ruled by a European oligarchy who tells them what to do, and live in poverty so that they can pay the bankers. **But the minute that concept came about in 1789, for it to occur, they had to get rid of the existing hierarchy, visible hierarchy, because there's always the hidden control mechanism.**

They had the French Revolution, chopped off the heads, sent it to the lab, studied what genetic powers that person represented, and began to write a formula for different trades. If you take this piece, considering that you're dealing with 23 chromosomes, and about 144 genetic instructions and 3 billion sub-instructions for tweeting something, one side or the other of the same argument type of thing.

With that as knowledge, they formed a database, and put it in the hands of Israelis who had moved to Europe; called Germans, Frenchmen, Spaniards, Portuguese, Dutch, Belgian, Scandinavian, **each being genetic pools sent out in 586 BC. When they got all of that stuff analyzed, they knew that they could build a worker population; a population they called "yes", as opposed to a population they called "no".** In royalties in the past, kings constantly got requests, and learned to say no, no, no, no, no.

Now you have to have a population who would work and do things following a written set of instructions, **even though it didn't always make much sense. That's why you find it difficult for bureaucrats to have common sense. They were manufactured as "yes people", and given the task of being the lower rank of government. They prevent access by the rest of the people who are not in government, to the people who control government, and feed only the information they need for their system to function properly to the leaders, who in fact, don't have the knowledge they need to make decisions. [They] only have knowledge that, in fact, will help the secret third party unknown to them.**

Creation through the Cell said, now that this system has been put in place in North America. Now that the task of getting into outer space was completed by the flight of two spacecraft in 1977, that has entered the Oort cloud. Now that the task of North America started in **1776 in the U.S., 1867 in Canada**, if you believe that they had no importance. **Whereas in fact they were genetically engineering babies since the 1500s, when Jacques Cartier came on his second voyage accompanied by Jean Chabot, who was the financier of genetic engineering in France.**

They began to make babies, and placed those babies in what is now **Nova Scotia** or otherwise known as Acadia. Then when they saw that they had what they wanted but not the final product, it needed some tweaking, they shipped them out to the U.S. and most of them landed in New Orleans, called today Cajuns. While the formula was tweaked somewhat, and the next batch were called Quebeckers.

Scotsmen were brought in from the tweaking they had done in the British Isles, and put in Nova Scotia where the Acadians used to live. **From Quebec they began to create the genetic engineering population of North America. To make it appear as if it was an American system, they wrote Johnny Appleseed; the Bible and the seed. So brainwashed the head through the genetic engineering of the seed. Then they moved out of the area of Montreal, their operation to Ottawa and then to New York State.** New York; **“York”** comes from the word **“Troy”**. **The mission of Troy; the K stands for mission.**

Jerd: Yeah, there is this place called Troy in upstate New York. I saw a movie a while ago about notable gangs in Hell's Kitchen; Irish mafia. They call a place like this, for example, Hell's Kitchen, and create, I guess, sociopaths, to live in Hell's Kitchen, and then they go on to create havoc?

Glen: The story that we have just touched upon, and probably took the better part of an hour, which means I've got to get out and do [inaudible]. **That's a story that requires much more time than is available on a phone call. It has to be done piece by piece, and can only be done if people choose to come here and participate here, and learn by osmosis over time. Because it takes a while to get the concepts clear in one's head.**

That cannot happen on the phone, cannot happen in a book. **It has to be done over time. So, the Cell said, what you need to do is recreate a temple, a hospital, a school, and all of those things you would find if you went to Jerusalem. The Temple Mount, but recreate it with a difference. We'll give you the instructions you need to make a call out, and those people who have a functioning brain will understand what you're talking about and come. Those who don't, which is the vast majority, will laugh at the possibility.**

For those who come, there will be an explanation given to everything that one might have as a question over time, and at the end of that teaching lesson, the group will be divided in two. One group that will stay behind and run this temple place, which they call “Bioch”, instead of Enoch.

Enoch did it at the beginning of the conversion to the number of people required to do the testing, going from millions to billions. Enoch did that at a period sometime in the vicinity of **700 B.C. 700 years after Adam; the story used in the Bible.** He did it by demonstrating a meeting with god, the genetic engineer, followed by the lifespan of his son being 900 and some years. Followed by the genetic engineering of a population, based upon the children of Abraham. Which in fact involved Abraham's wife, Sarai, which is the basis of the word "Israel" and "Puritans".

N-A-T-S-I, Pakistan, is a cut out piece of India, and its extension into Islam. Is an extension of the power of the Buddhists out of India, on the other side. This "**Bud's for you**" is talking about a seed. **Buddhism is the seed that came out of India, followed by another seed, genetically modified, that came out of India in a region we now call Pakistan.**

But the promised land could never be number one, could never be number two, has to be linked to **nurturing**. The symbol of nurturing is the number "**3**", which is linked to the "**tree**" in its phonetics, and "**breasts**" in its pictogram. That means here is the site of the third temple. **It's got to happen soon, because there's going to be a division away from this universe, to a new universe, by the people who have maintained their original ability to have common sense.**

Not complicated, it's just a long time to explain. Because it started 80 some million years ago with the advent of the tree. Long time ago, before the dinosaur. Dinosaur is part of the lesson. Dinosaur is big. **Well, big is not necessarily better if the brain doesn't function properly. Intelligence is useless for anything but task orientation. Smarts is how rats work. Rats develop the systems for discovery on earth.**

The dinosaur could not squeeze through cracks in the underground rock to get from cave to cave. **A rat could. Rats begat bats in a cave. Rats begat cats on the surface.** Wild cats, like tigers, lions, lynx, and all of the other versions that exist. **But tamed cats entered the house and began to live, and teach people, not the other way around.** The brain caught on and worked properly until a governor took power, and hid away from the people, pretended to be a male, and called himself god, which is dog, supposedly the enemy of cats. Gotta go now.

Jerd: Ok, Glen.

Glen: Bye for now.

Jerd: Yep. Thank you
